

SYARIFAH KEMALA PUTRI

+6281351952909 | Medan, Indonesia | syarifahkemalaputri@gmail.com

PROFESSIONAL SUMMARY

Computer Science graduate with experience in data processing, web scraping validation, and NLP research. Skilled in Python, data analysis, and working with structured datasets. Proven ability to maintain high data quality through QC processes and consistently achieve strong KPI performance.

WORK EXPERIENCE

Website Administrator | Faculty of Engineering USU

September 2019 – September 2020

- Responsible for publishing the latest news, circulars, and activities related to the faculty.
- Responsible for organizing activity publication documents and softcopy of circulars on campus.
- Delivering the latest information and upcoming activities to students.

Intern | KPKNL, Kementrian Keuangan Republik Indonesia

July 2019 – August 2019

- Intern as Web Developer in General Subsection division to build Archiving information system using HTML, CSS, Javascript and MySQL.

Teaching Assistant | Ilmu Komputer Laboratory Center (IKLC) USU

July 2017 – February 2019

- Delivered lectures on Basic Web Programming and Database concepts to students.
- Improved student understanding through updated learning modules aligned with current technologies.

Research Assistant | Lecturer Research

February 2020 – September 2020

- Managed and coordinated research administration, including documentation, scheduling, and communication with team members.
- Developed research-related programs and contributed to drafting research proposals and reports.
- Processed and translated datasets from Indonesian to English to support analysis and publication.
- Assisted in data preparation, validation, and organization for research purposes.
- Collaborated with lecturers and research teams to ensure smooth project execution.

Data Scraper, Dish Reviewer & Dish Quality Assurance | FoodStyle

October 2021 – March 2026

- Performed web scraping of restaurant menu data from various websites into structured JSON format using proprietary tools.
- Investigated and reported issues in scraping processes and tools, contributing to improved workflow reliability.
- Validated and reviewed scraped data to ensure accuracy, completeness, and compliance with company SOP (Quality Control role).
- Acted as a Dish Reviewer, responsible for approving or rejecting scraping results based on established data quality standards.
- Improved data accuracy by identifying inconsistencies and providing structured feedback to the scraping team.
- Collaborated with team members to troubleshoot issues and recommend correct JSON structures and parsing logic.
- Handled large-scale menu datasets from diverse web sources, ensuring consistency and reliability of structured data.
- Prepared regular reports summarizing work progress, identified issues, and performance outcomes.
- Maintained up-to-date knowledge of evolving SOPs and ensured consistent implementation in daily operations.
- Demonstrated strong performance under KPI evaluation system, consistently achieving scores of 4–5 out of 6 in communication, work quality, and timeliness.

OTHER SKILLS

- **Programming:** Python, SQL, JavaScript.
- **Data Analysis:** Pandas, NumPy, Excel (Pivot Table, Power Pivot).
- **Web Scraping & Data Processing:** JSON structuring, data validation, parsing.
- **AI / NLP:** Word2Vec, BERT, BiLSTM, LLM (ChatGPT customization, AI agent) .

CERTIFICATION

- **Online Academy Digital Talent Scholarship Awarded**, Data scientist training organize by Ministry of Technology and Information held in March 2021.
- **Dicoding**, training organized by Dicoding Indonesia in the form basic data visualization using Python held in August 2020.

EDUCATION

UNIVERSITAS SUMATERA UTARA

Bachelor Degree, Computer Science
September 2016 – September 2020
GPA: 3.74 out of 4.0

Master Degree, Informatics Engineering
August 2021 – January 2024
GPA: 3.8 out of 4.0

RESEARCH

Bahasa Indonesia Pre-Trained Word Vector Generation Using Word2vec for Computer and Information Technology Field

5th International Conference on Computing and Applied Informatics (ICCAI). December 2020

- Built an Indonesian domain-specific corpus for computer and information technology terminology.
- Generated word embeddings using Word2vec to capture semantic relationships between technical terms.
- Evaluated word similarity to analyze contextual meaning and improve understanding of domain-specific language.

Sentiment Analysis Multi-Label of Toxic Comment Using BERT-BiLSTM Methods

5th International Conference on Electrical Engineering and Informatics (ICELTICs). September 2024

- Developed a multi-label classification model using BERT and BiLSTM to identify multiple categories of toxic comments from Twitter.
- Handled imbalanced dataset issues to improve classification performance across labels.
- Applied deep learning and NLP techniques for contextual text representation and sequence modeling.
